Start with a small amount  
and go slow  
Stagger doses with your  
friends

Try not to use alone  
if that's not possible, utilize  
the Never Use Alone hotline  
800-484-3731

### OTHER WAYS TO USE SAFELY

## WHAT IS FENTANYL

Fentanyl is a synthetic opioid that is 50 times more potent than morphine

Fentanyl is cheap to manufacture and a little bit goes a long way

Overdose deaths involving fentanyl have quadrupled over the last few years

fentanyl has been found as an additive in a wide array of street drugs such as cocaine, Xanax, pressed pills, ecstasy, and more

## FENTANYL MYTHS

You can overdose from touching fentanyl

it is impossible to overdose from casual contact with fentanyl by touching it or breathing it in. You would need to be exposed to a massive amount in order to feel any adverse effects. It must be introduced to the bloodstream through injection or the mucus membrane

Fentanyl is Narcan resistant

it is an opioid and will respond to Narcan the same way that other opioids will

Weed can be laced with fentanyl

fentanyl needs an indirect heat source to be smoked and will not burn at the same temperature as weed

## HOW TO USE FENTANYL TEST STRIPS

1. add 1/4 inch sterile water into drug residue (in bag or cooker)
2. holding BLUE end of strip, dip end of test strip in water for 15 SECONDS
3. set aside and check after 5 MINUTES

one line = fentanyl  
two lines = NO fentanyl  
no lines = invalid test (redo)
